

ONELAN

LG webOS Signage Solution

LG webOS displays are available in range of screen sizes from 22"-65". These displays include the latest generation quad core processors and eliminate the need for an external signage player for basic digital signage applications e.g. menu boards, internal communications and retail.

ONELAN's webOS Signage Solution is a software application which is licenced within the ONELAN CMS and installed directly on the webOS display.

Example Layout

Why Choose ONELAN LG webOS digital signage solution?

- ◆ Central web based device management and health monitoring via ONELAN CMS
